

Individually

Focusing on the specific needs of individual children is a highly effective strategy to improve learning outcomes. Sometimes, children just need that little bit of extra time and one-on-one support to help them acquire or consolidate a concept.

Smart Learner and **Smart Learner** Manual are so easy to use. The activity plans are comprised of educational concept covered within the activity, step-by-step instructions, resources needed to complete the activity, extension ideas and language suggestions, including positive reinforcement for the adult to feed back to the child.

Individually, **Smart Learner** can be used in the following ways.

- Easily supported by teacher aides, parent volunteers, and/or in peer tutoring program
- Effective tool for individual intervention: select a suitable plan, implement it and assess using **Smart Learner** Assessment Checklists (download from this website).
- Can be used by specialist teachers (e.g. ESL, Learning Support).
